

ENSSER Statement, 21 October 2013

[www.ensser.org](http://www.ensser.org)

## No scientific consensus on GMO safety

As scientists, physicians, academics, and experts from disciplines relevant to the scientific, legal, social and safety assessment aspects of genetically modified organisms (GMOs),<sup>1</sup> we strongly reject claims by GM seed developers and some scientists, commentators, and journalists that there is a “scientific consensus” on GMO safety<sup>2 3 4</sup> and that the debate on this topic is “over”.<sup>5</sup>

We feel compelled to issue this statement because the claimed consensus on GMO safety does not exist. The claim that it does exist is misleading and misrepresents the currently available scientific evidence and the broad diversity of opinion among scientists on this issue. Moreover, the claim encourages a climate of complacency that could lead to a lack of regulatory and scientific rigour and appropriate caution, potentially endangering the health of humans, animals, and the environment.

Science and society do not proceed on the basis of a constructed consensus, as current knowledge is always open to well-founded challenge and disagreement. We endorse the need for further independent scientific inquiry and informed public discussion on GM product safety and urge GM proponents to do the same.

Some of our objections to the claim of scientific consensus are listed below.

### 1. There is no consensus on GM food safety

---

<sup>1</sup> In the US, the term “genetically engineered” is often used in place of “genetically modified”. We have used “genetically modified” because this is the terminology consistently used by many authorities internationally, including the Food and Agriculture Organization of the United Nations; the World Health Organization; Codex Alimentarius; European and Indian legislation; peer-reviewed studies by industry and independent scientists; and the international media. It is also consistent with the Cartagena Protocol’s term “living modified organism”.

<sup>5</sup> White, M. (2013). The scientific debate about GM foods is over: They’re safe. Pacific Standard magazine, 24 Sept. <http://www.psmag.com/health/scientific-debate-gm-foods-theyre-safe-66711/>

Regarding the safety of GM crops and foods for human and animal health, a comprehensive review of animal feeding studies of GM crops found “An equilibrium in the number [of] research groups suggesting, on the basis of their studies, that a number of varieties of GM products (mainly maize and soybeans) are as safe and nutritious as the respective conventional non-GM plant, and those raising still serious concerns”. The review also found that most studies concluding that GM foods were as safe and nutritious as those obtained by conventional breeding were “performed by biotechnology companies or associates, which are also responsible [for] commercializing these GM plants”.<sup>6</sup>

A separate review of animal feeding studies that is often cited as showing that GM foods are safe included studies that found significant differences in the GM-fed animals. While the review authors dismissed these findings as not biologically significant,<sup>7</sup> the interpretation of these differences is the subject of continuing scientific debate<sup>8 9 10 11</sup> and no consensus exists on the topic.

Rigorous studies investigating the safety of GM crops and foods would normally involve animal feeding studies in which one group of animals is fed GM food and another group is fed an equivalent non-GM diet. Independent studies of this type are rare, but when such studies have been performed, some have revealed toxic effects or signs of toxicity in the GM-fed animals.<sup>12 13 14 15 16 17</sup> The concerns raised by these studies have not been followed up by targeted research that could confirm or refute the initial findings.

The lack of scientific consensus on the safety of GM foods and crops is underlined by the recent research calls of the European Union and the French

government to investigate the long-term health impacts of GM food consumption in the light of uncertainties raised by animal feeding studies.<sup>18 19</sup> These official calls imply recognition of the inadequacy of the relevant existing scientific research protocols. They call into question the claim that existing research can be deemed conclusive and the scientific debate on biosafety closed.

## **2. There are no epidemiological studies investigating potential effects of GM food consumption on human health**

It is often claimed that “trillions of GM meals” have been eaten in the US with no ill effects. However, no epidemiological studies in human populations have been carried out to establish whether there are any health effects associated with GM food consumption. As GM foods are not labelled in North America, a major producer and consumer of GM crops, it is scientifically impossible to trace, let alone study, patterns of consumption and their impacts. Therefore, claims that GM foods are safe for human health based on the experience of North American populations have no scientific basis.

## **3. Claims that scientific and governmental bodies endorse GMO safety are exaggerated or inaccurate**

Claims that there is a consensus among scientific and governmental bodies that GM foods are safe, or that they are no more risky than non-GM foods,<sup>20 21</sup> are false.

For instance, an expert panel of the Royal Society of Canada issued a report that was highly critical of the regulatory system for GM foods and crops in that country. The report declared that it is “scientifically unjustifiable” to presume that GM foods are safe without rigorous scientific testing and that the “default prediction” for every GM food should be that the introduction of a new gene will cause “unanticipated changes” in the expression of other genes, the pattern of proteins produced, and/or metabolic activities. Possible outcomes of these changes identified in the report included the presence of new or unexpected allergens.<sup>22</sup>

January. [http://www.rsc.ca/files/publications/expert\\_panels/foodbiotechnology/GMreportEN.pdf](http://www.rsc.ca/files/publications/expert_panels/foodbiotechnology/GMreportEN.pdf)

A report by the British Medical Association concluded that with regard to the long-term effects of GM foods on human health and the environment, “many unanswered questions remain” and that “safety concerns cannot, as yet, be dismissed completely on the basis of information currently available”. The report called for more research, especially on potential impacts on human health and the environment.<sup>23</sup>

Moreover, the positions taken by other organizations have frequently been highly qualified, acknowledging data gaps and potential risks, as well as potential benefits, of GM technology. For example, a statement by the American Medical Association’s Council on Science and Public Health acknowledged “a small potential for adverse events ... due mainly to horizontal gene transfer, allergenicity, and toxicity” and recommended that the current voluntary notification procedure practised in the US prior to market release of GM crops be made mandatory.<sup>24</sup> It should be noted that even a “small potential for adverse events” may turn out to be significant, given the widespread exposure of human and animal populations to GM crops.

A statement by the board of directors of the American Association for the Advancement of Science (AAAS) affirming the safety of GM crops and opposing labelling<sup>25</sup> cannot be assumed to represent the view of AAAS members as a whole and was challenged in an open letter by a group of 21 scientists, including many long-standing members of the AAAS.<sup>26</sup> This episode underlined the lack of consensus among scientists about GMO safety.

#### **4. EU research project does not provide reliable evidence of GM food safety**

An EU research project<sup>27</sup> has been cited internationally as providing evidence for GM crop and food safety. However, the report based on this project, “A Decade of EU-Funded GMO Research”, presents no data that could provide such evidence, from long-term feeding studies in animals.

Indeed, the project was not designed to test the safety of any single GM food, but to focus on “the development of safety assessment approaches”.<sup>28</sup> Only five published animal feeding studies are referenced in the SAFOTEST section of the

<sup>27</sup> European Commission (2010). A decade of EU-funded GMO research (2001–2010).

<sup>28</sup> European Commission (2010): 128.

report, which is dedicated to GM food safety.<sup>29</sup> None of these studies tested a commercialised GM food; none tested the GM food for long-term effects beyond the subchronic period of 90 days; all found differences in the GM-fed animals, which in some cases were statistically significant; and none concluded on the safety of the GM food tested, let alone on the safety of GM foods in general. Therefore the EU research project provides no evidence for sweeping claims about the safety of any single GM food or of GM crops in general.

## 5. List of several hundred studies does not show GM food safety

A frequently cited claim published on an Internet website that several hundred studies “document the general safety and nutritional wholesomeness of GM foods and feeds”<sup>30</sup> is misleading. Examination of the studies listed reveals that many do not provide evidence of GM food safety and, in fact, some provide evidence of a lack of safety. For example:

- Many of the studies are not toxicological animal feeding studies of the type that can provide useful information about health effects of GM food consumption. The list includes animal production studies that examine parameters of interest to the food and agriculture industry, such as milk yield and weight gain;<sup>31 32</sup> studies on environmental effects of GM crops; and analytical studies of the composition or genetic makeup of the crop.
- Among the animal feeding studies and reviews of such studies in the list, a substantial number found toxic effects and signs of toxicity in GM-fed animals compared with controls.<sup>33 34 35 36 37 38</sup> Concerns raised by these studies have not been satisfactorily addressed and the claim that the body

- of research shows a consensus over the safety of GM crops and foods is false and irresponsible.
- Many of the studies were conducted over short periods compared with the animal's total lifespan and cannot detect long-term health effects.<sup>39 40</sup>

We conclude that these studies, taken as a whole, are misrepresented on the Internet website as they do not “document the general safety and nutritional wholesomeness of GM foods and feeds”. Rather, some of the studies give serious cause for concern and should be followed up by more detailed investigations over an extended period of time.

## **6. There is no consensus on the environmental risks of GM crops**

Environmental risks posed by GM crops include the effects of Bt insecticidal crops on non-target organisms and effects of the herbicides used in tandem with herbicide-tolerant GM crops.

As with GM food safety, no scientific consensus exists regarding the environmental risks of GM crops. A review of environmental risk assessment approaches for GM crops identified shortcomings in the procedures used and found “no consensus” globally on the methodologies that should be applied, let alone on standardized testing procedures.<sup>41</sup>

Some reviews of the published data on Bt crops have found that they can have adverse effects on non-target and beneficial organisms<sup>42 43 44 45</sup> – effects that are widely neglected in regulatory assessments and by some scientific commentators. Resistance to Bt toxins has emerged in target pests,<sup>46</sup> and problems with secondary (non-target) pests have been noted, for example, in Bt

cotton in China.<sup>47 48</sup>

Herbicide-tolerant GM crops have proved equally controversial. Some reviews and individual studies have associated them with increased herbicide use,<sup>49 50</sup> the rapid spread of herbicide-resistant weeds,<sup>51</sup> and adverse health effects in human and animal populations exposed to Roundup, the herbicide used on the majority of GM crops.<sup>52 53 54</sup>

As with GM food safety, disagreement among scientists on the environmental risks of GM crops may be correlated with funding sources. A peer-reviewed survey of the views of 62 life scientists on the environmental risks of GM crops found that funding and disciplinary training had a significant effect on attitudes. Scientists with industry funding and/or those trained in molecular biology were very likely to have a positive attitude to GM crops and to hold that they do not represent any unique risks, while publicly-funded scientists working independently of GM crop developer companies and/or those trained in ecology were more likely to hold a “moderately negative” attitude to GM crop safety and to emphasize the uncertainty and ignorance involved. The review authors concluded, “The strong effects of training and funding might justify certain institutional changes concerning how we organize science and how we make public decisions when new technologies are to be evaluated.”<sup>55</sup>

## **7. International agreements show widespread recognition of risks posed by GM foods and crops**

The Cartagena Protocol on Biosafety was negotiated over many years and implemented in 2003. The Cartagena Protocol is an international agreement ratified by 166 governments worldwide that seeks to protect biological diversity from the risks posed by GM technology. It embodies the Precautionary Principle

in that it allows signatory states to take precautionary measures to protect themselves against threats of damage from GM crops and foods, even in case of a lack of scientific certainty.<sup>56</sup>

Another international body, the UN's Codex Alimentarius, worked with scientific experts for seven years to develop international guidelines for the assessment of GM foods and crops, because of concerns about the risks they pose. These guidelines were adopted by the Codex Alimentarius Commission, of which over 160 nations are members, including major GM crop producers such as the United States.<sup>57</sup>

The Cartagena Protocol and Codex share a precautionary approach to GM crops and foods, in that they agree that genetic engineering differs from conventional breeding and that safety assessments should be required before GM organisms are used in food or released into the environment.

These agreements would never have been negotiated, and the implementation processes elaborating how such safety assessments should be conducted would not currently be happening, without widespread international recognition of the risks posed by GM crops and foods and the unresolved state of existing scientific understanding.

Concerns about risks are well-founded, as has been demonstrated by studies on some GM crops and foods that have shown adverse effects on animal health and non-target organisms, indicated above. Many of these studies have, in fact, fed into the negotiation and/or implementation processes of the Cartagena Protocol and Codex. We support the application of the Precautionary Principle with regard to the release and transboundary movement of GM crops and foods.

## **Conclusion**

In the scope of this document, we can only highlight a few examples to illustrate that the totality of scientific research outcomes in the field of GM crop safety is nuanced, complex, often contradictory or inconclusive, confounded by researchers' choices, assumptions, and funding sources, and in general, has raised more questions than it has currently answered.

Whether to continue and expand the introduction of GM crops and foods into the human food and animal feed supply, and whether the identified risks are acceptable or not, are decisions that involve socioeconomic considerations beyond the scope of a narrow scientific debate and the currently unresolved

biosafety research agendas. These decisions must therefore involve the broader society. They should, however, be supported by strong scientific evidence on the long-term safety of GM crops and foods for human and animal health and the environment, obtained in a manner that is honest, ethical, rigorous, independent, transparent, and sufficiently diversified to compensate for bias.

Decisions on the future of our food and agriculture should not be based on misleading and misrepresentative claims that a “scientific consensus” exists on GMO safety.

45	Carlo	Leifert	PhD, Dean of Business Development and Professor for Ecological Agriculture, University of Newcastle	UK
46	Deborah	Letourneau	PhD, Professor of Environmental Studies	USA
47	Les	Levidow	PhD, Senior Research Fellow, Center for Technology, Open University	UK
48	Robert	Mann	PhD, Senior Lecturer in Biochemistry and in Environmental Studies, University of Auckland, retired	New Zealand

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

49	Jan	Diek van Mansvelt	PhD, Professor Emeritus, Organic Agriculture	The Netherlands
50	Terry	Marsden	PhD, Professor of Environmental Policy and Planning, Director of the Sustainable Places Research Institute, Cardiff University	UK
51	Lyla	Mehta	PhD, Fellow in Development Studies	UK
52	Leonardo	Melgarejo	PhD in Production Engineering, Argonomist	Brazil
53	Martha	Mertens	PhD, Expertise: Risk Assessment of Genetically Modified Plants/ Genetic Engineering, Institute for Biodiversity Network	Germany
54	Hartmut	Meyer	PhD, Member of ENSSER	Germany
55	Erik	Millstone	PhD, Professor of Science and Technology Policy, University of Sussex	UK
56	Rubens Onofre	Nodari	PhD, Professor	Brazil
57	Eva	Novotny	PhD in Astronomy, University of Cambridge, retired	UK
58	Leon	Olive	PhD, Professor of Philosophy, Universidad Nacional Autónoma de México (UNAM)	Mexico
59	Mathias	Otto	PhD, Biologist, Member of ENSSER	Germany
60	Thibaud	d' Oultremont	PhD, Modeling and Simulation of Water and Land Ecosystems	Belgium
61	Jean-Michel	Panoff	PhD	France
62	Bas	Pedroli	PhD, Associate Professor, Land Use Planning Group, Wageningen University	The Netherlands
63	Ivette	Perfecto	PhD, Professor of Natural Resources and Environment, University of Michigan	USA
64	Michel	Pimbert	PhD, Centre for Agroecology and Food Security, Coventry University	UK
65	Alma	Piñeyro-Nelson	PhD, Postdoctoral Researcher in Plant Sciences, University of California, Berkeley	USA

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

66	Luigi	Ponti	PhD, Research Scientist in Agroecology/ Crop System Analysis, Agenzia nazionale per le nuove tecnologie, l'energia e lo sviluppo economico sostenibile (ENEA)	Italy
67	Arpad	Pusztai	PhD on biochemistry, protein chemistry, Fellow of the Royal Society of Edinburgh, formerly at the Rowett Institute Aberdeen	UK
68	Paulo Cezar	Mendes Ramos	PhD, Environmental Analyst, Chico Mendes Biodiversity Conservation Institute/ Member of the National Biosafety Technical Commission	Brasil
69	Leda	Raptis	PhD in Molecular Cell Biology, Professor, Cancer Researcher, Queen's University	Canada
70	Irina	Rodriguez de la Flor	JD, Health Defense Organization	Spain
71	Suman	Sahai	PhD in Genetics from the Indian Agricultural Research Institute, Delhi / Gene Campaign	India
72	Peter	Saunders	PhD, Professor Emeritus in Applied Mathematics, King's College London / Co-Director Institute of Science in Society	UK
73	David	Schubert	PhD, Professor and Director of Cellular Neurobiology, The Salk Institute for Biological Studies	USA
74	Gilles-Eric	Seralini	PhD, President of the Scientific Council of the Comité de Recherche et d'Information Indépendantes sur le génie GENétique (CRIIGEN)	France
75	José-Antonio	Serratos-Hernández	PhD, Expertise: Biotechnology/ Biosafety/ Community Health, Universidad Autónoma de la Ciudad de México (UACM)	Mexico
76	Vandana	Shiva	Ph.D. in Foundations of Quantum Theory, Navdanya /Research Foundation for Science Technology and Ecology	India
77	Av	Singh	PhD PAG, Just Us! Centre for Small Farms	Canada
78	Eva	Sirinathsinghji	PhD, Molecular Biologist, Institute of Science in Society	UK

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

79	Gerald	Smith	PhD, Professor Emeritus, Department of Ecology and Evolutionary Biology, University of Michigan	USA
80	Ricarda A.	Steinbrecher	PhD, biologist and molecular geneticist, Director EcoNexus	UK
81	Mark	Stemen	PhD in Environmental History, Associate Professor	USA
82	Andy	Stirling	PhD, Professor of Science and Technology Policy, University of Sussex	UK
83	Peter	Stonehouse	PhD, Department of Food, Agricultural and Resource Economics, University of Guelph, retired	Canada
84	Beatrix	Tappeser	PhD, Expertise: Ecology/Molecular Biology/Plant Physiology, Board Member Federation of German Scientists	Germany
85	Antonio	Turrent	PhD, Professor in Agricultural Science, Instituto Nacional de Investigaciones Forestales, Agrícolas y Pecuarias (INIFAP)	Mexico
86	John	Vandermeer	PhD, Professor, Department of Ecology and Evolutionary Biology, University of Michigan	USA
87	Christian	Vélot	PhD	France
88	Henk	Verhoog	PhD	The Netherlands
89	Hermann	Waibel	PhD, Professor	Germany
90	Tom	Wakeford	PhD, Senior Research Fellow, Interdisciplinary Social Sciences in Health, University of Edinburgh	UK
91	Ernst Ulrich	von Weizsäcker	PhD on zoology, Professor of Biology, Co-Chair International Resource Panel of the UN Environmental Programme / Co-President The Club of Rome	Germany
92	Fern	Wickson	PhD, Research Scientist, GenØk Centre for Biosafety	Norway
93	David S.	Williams	PhD in Neurobiology, Cellular and Molecular Biologist, Professor, University of California, Los Angeles	USA
94	Peter R.	Wills	PhD, Associate Professor, Department of Physics, University of Auckland	New Zealand
95	Allison	Wilson	PhD, Biologist and Molecular Geneticist, Science Director, The Bioscience Resource Project	USA

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

96	Madeleen	Winkler	MD, Medical Doctor	The Netherlands
97	Brian	Wynne	PhD, Professor of Science Studies, Lancaster University	UK
98	José Luis	Yela	PhD, Entomologist, Professor of Zoology and Conservation Biology, University of Castilla-La Mancha	Spain
<b>Scientists, physicians, social scientists (PhD and more)</b>

143	Luz María	del Carmen Huerta Crespo	PhD in Entomology	Mexico
144	Martin	Donohoe	Physician/Scientist, Portland State University, Physician, Adjunct Associate Professor	USA
145	Larry	Dossey	MD, Medical Doctor of Internal Medicine, Executive Editor of Explore: The Journal of Science and Healing	USA
146	Jose	Duarte	PhD in Biochemical Engineering, Senior Researcher, retired	Portugal
147	Francisco	Echegaray	PhD, Associate Professor of Chemistry, University of Puerto Rico	Puerto Rico
148	John	Ehrlich	PhD in Microbiology	USA
149	Philippe	Elskens	PhD, Geneticist	Belgium

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

150	Ossama	El-Tayeb	PhD, Professor Emeritus of Microbiology and Immunology, Cairo University, former Senior Program Officer for Genetic Resources and Biotechnology at the United Nations Environment Program	Egypt
151	Mary	Eubanks	PhD, Professor in Biology with a Specialty in Maize Genetics, Department of Biology, Duke University	USA
152	Ole	Faergeman	MD, Medical Doctor, Doctor of Medical Science, Professor Emeritus of Preventive Cardiology, Aarhus University Hospital	Denmark
153	Maria	Finckh	PhD in Botany and Plant Pathology, Professor of Ecological Plant Protection, University of Kassel	Germany
154	Hans-Jürgen	Fischbeck	PhD in Physics	Germany
155	Gabriela	Flores Ramírez	PhD, Institute of Virology, Slovak Academy of Sciences	Slovakia
156	Ian	Forrester	PhD in Biochemistry, Retired	Canada
157	Michael W.	Fox	PhD, DVM, Veterinary Doctor	USA
158	Alan	Fredeen	PhD, Haley Institute, Dalhousie University	Canada
159	Hugo	Freije	PhD, Environmental Chemist, Professor at Universidad Nacional del Sur	Argentina
160	Jaime E.	García González	PhD, Acricultural Scientist, Universidad Estatal a Distancia	Costa Rica
161	Louise	Gaynor	PhD in Neuroscience, University College London	UK
162	Lode	Gepts	MD, Medical Doctor of Pulmonology	Belgium
163	Mazen	Ghani	MD, Medical Doctor	USA
164	Adrian	Gibbs	PhD, in Plant Virology, Australian National University Emeritus Faculty, Fellow of the Australian Academy of Science	Australia
165	Doug	Gilbert	Scientist, Inventor, Physician	USA
166	Manuela	Giovannetti	PhD, Professor in Agricultural Microbiology, University of Pisa	Italy
167	Michaela	Glöckler	MD, Medical Doctor, Head Medical Section Goetheanum	Switzerland

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

168	Emmanuel	González-Ortega	PhD, Post-Doctoral Researcher Molecular Genetics, Development and Evolution of Plants, Universidad Nacional Autónoma de México (UNAM)	Mexico
169	Rudolf	Gorenflo	PhD, Professor Emeritus, Mathematics, Free University of Berlin	Germany
170	Geoffrey M.	Greenbaum	MD, Medical Doctor, retired	Australia
171	Marija	Gregori	PhD, Reserarch Unit Manager on Agroecosystem Behaviour and Organic Seed Production, Biotechnical Centre Naklo	Slovenja
172	Jeremy	Gruber	JD, President of Council for Responsible Genetics	USA
173	Kerry	Grundy	PhD, Member New Zealand Planning Institute (MNZPI)	New Zealand
174	Xiulin	Gu	PhD, Agricultural and Resource Economics, Yunnan University of Finance and Economics	China
175	Wilbert	Himmighofen	PhD, Acricultural Scientist	Germany
176	Peter	Hinderberger	MD, Medical Doctor, Physicians Association for Anthroposophic Medicine	USA
177	Wilhelm	Höfer	DVM, Veterinary Doctor	Germany
178	Johannes	Hoffmann	PhD, Professor for Social Ethics and Economic Ethics	Germany
179	F. Brian	Holl	PhD, in Fungal Genetics, Professor Emeritus, University of British Columbia	Canada
180	Steve	Holzberg	PhD in Plant Pathology	USA
181	Muzammal	Hussain	MD, Medical Doctor, Royal Free Hospital School of Medicine	UK
182	Federico	Infascelli	PhD, Professor of Animal Nutrition, University of Naples Federico II	Italy
183	Sander	Jacobs	PhD, Ecologist, Research Institute for Nature and Forest	Belgium
184	JoAnn	Jaffe	PhD, Professor of Sociology and Social Studies, University of Regina	Canada
185	Christine	Jasch	PhD, Professor of Environmental Economics, Institute for Environmental Management and Economics, University of Vienna	Austria
186	Brian	John	PhD, Durham University, retired	UK

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

187	Helmut	Käss	MD, Medical Doctor	Germany
188	Hank	Keeton	PhD, Farmer-Philosopher-Physicist	USA
189	Mickelder	Kercy	MD, Medical Doctor, Public Health	USA
190	Shumaisa	Khan	PhD in Natural Resources and Environment, Research Fellow, Food, Consumer Behaviour and Health Research Centre, University of Surrey	UK
191	Sayed K.	Khattari	Ph.D. in Agronomy, Soil Fertility and Plant Nutrition, Professor at Faculty of Agriculture, University of Jordan	Jordan
192	Paul G.	King	PhD, Analytical Chemist	USA
193	Joanna	Kirkpatrick	PhD in Social and Cultural Anthropology, Bennington College, retired	USA
194	Theodoros	Kokkorogiannis	PhD in Biology , Farmer	Greece
195	Krisztina J.	Kovács	PhD in Biology, Laboratory of Molecular Neuroendocrinology, Institute of Experimental Medicine, University of Budapest	Hungary
196	Werner	Kratz	PhD in Ecology and Ecotoxicology	Germany
197	Christophe	Kreis	PhD, Molecular and Developmental Biology, University of British Columbia	Canada
198	Ruben	Kretzschmar	PhD, Professor of Soil Chemistry, Swiss Federal Institute of Technology (ETHZ)	Switzerland
199	Sheldon	Krimsky	PhD, Lenore Stern Professor Humanities & Social Sciences, School of Arts & Sciences and Adjunct Professor Public Health & Community Medicine, Tufts University Medical School	USA
200	Margaret P.	Kuebler	JD, Attorney	USA
201	Karon	Kuindersma	MD, Medical Doctor	
202	Balkrishna	Kurvey	PhD, President, Indian Institute for Peace Disarmament & Environmental Protection	India
203	Sándor	Lakó	PhD in Physics	Hungary
204	Gottfried	Lange	MD, Medical doctor	Germany

Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015

205	Mary Antoinette	LaRussa	PhD in Mathematics and in science education, New Mexico Tech	USA
206	Laura	Lasater	MD, Medical Doctor	USA
207	Tim	Laugherty	PhD, Pharmacist	
208	Geoffrey	Lawrence	PhD, Professor of Sociology, University of Queensland	Australia
209	Arnaldo	Llerena Pinto	MD, Medical Doctor	Spain
210	Ulrich	Loening	PhD in Biochemistry, Former Director of Centre for Human Ecology, University of Edinburgh, retired	UK
211	Citlalli	Lopez Binnquist	PhD, Professor of Ehtnobotany and Rural Development, University of Veracruz	Mexico
212	Gabor L.	Lövei	PhD DSc, Aarhus University / Fujian University of Agriculture and Forestry	Denmark
213	Sarah	Lowry	PhD in Cancer Epidemiology, Postdoctoral Fellow at Fred Hutchinson Cancer Research Center, University of Washington, USA	USA
214	Amyan	Macfadyen	PhD, Fellow of the Royal Entomological Society, Fellow Royal Irish Academy, Professor of Zoology, University of Ulster	UK
215	Claire	Marris	PhD in plant molecular biology, Senior Research Fellow, King's College London	UK
216	Belinda	Martineau	PhD, Molecular Geneticist, UC Davis / Performed safety studies for the world's first GE crop: Flavr Savr™ tomato	USA
217	Claudio	Martinez	PhD, Molecular Biologist, University of Montevideo	Uruguay
218	Rosemary	Mason	MD, Medical Doctor, Fellowship of the Royal College of Anaesthetists, retired	UK
219	Juanita	Mathews	PhD, Molecular Biosciences and Bioengineering	USA
220	Marc	Mathieu	PhD in Biochemistry, Cell and Molecular Biology, Institut national de la santé et de la recherche médicale (Inserm)	France
221	Heli	Matilainen	PhD in Biotechnology, consultant	New Zealand
222	Rebecca	McKinlay	PhD in Environmental Science, Researcher, Scottish Parliament	UK

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

223	Matthias	Meier	PhD in Environmental Sciences, Research Institute of Organic Agriculture	Switzerland
224	Dieter	Meissner	PhD, Professor of Chemistry, Tallinn University of Technology	Estonia
225	Juliana	Merçon	PhD, Professor of Environmental Ethics, University of Veracruz	Mexico
226	Robin	Mesnage	PhD, King's College London	UK
227	Wang	Minglian	PhD, College of Life Science & Bioengineering, Beijing University of	China
228	Niels Iver	Møller	MD, Medical Doctor	Denmark
229	Raul	Montenegro	PhD, Professor of Evolutionary Biology, National University of Cordoba, Alternative Nobel Prize 2004	Argentina
230	Adrian	Müller	PhD, Researcher, Swiss Federal Institute of Technology (ETHZ)	Switzerland
231	Rainer	Müller	MD, Medical Doctor, Professor, University of Bremen	Germany
232	Amar KJR	Nayak	PhD, Professor of Strategic Management, Chair Professor, National Bank for Agriculture & Rural Development, Xavier Institute of Management Bhubaneswar	India
233	Patricia	Negreros-Castillo	PhD in Forestry, University of Veracruz	Mexico
234	John D.	Nelson Jr.	PhD, Microbiologist, retired	USA
235	Pun	Ngai	PhD, Department of Applied Social Sciences, Hong Kong Polytechnic University	Hong Kong
236	Ronald	Nigh	PhD in Ecological Anthropology	Mexico
237	Joserra	Olarieta	PhD, Lecturer, Universitat de Lleida	Spain
238	Michele	O'Neill	MD, Medical Doctor	USA
239	F.A.	Opmeer	MD, Medical Doctor, Biochemist & Pharmacologist	The Netherlands
240	Jacinta	Palerm	PhD in Social Anthropology, Colegio des Postgrados	Mexico
241	John	Palmer	PhD, Prof. Emeritus, University of North Carolina Chapel Hill	USA
242	Devon G.	Peña	PhD, Agroecologist, Professor at University of Washington	USA

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

243	Pietro	Perrino	PhD in Agricultural Science, Former Director of the Germplasm Institute of the Italian National Research Council	Italy
244	Grygorii	Petjuch	PhD, geneticist, Biotechnologist	Ukraine
245	Bence	Petovari	PhD, Agricultural Sciences, Corvinus University of Budapest	Hungary
246	William	Pilgrim	PhD, Professor Emeritus of Biophysics, University of Ontario	Canada
247	Warren P.	Porter	PhD, Professor of Zoology and of Environmental Toxicology , University of Wisconsin Madison	USA
248	John D.	Potter	PhD, MD, Medical Doctor, Division of Oublic Health Services, Fred Hutchinson Cancer Research Center / Professor Emeritus of Epidemiology, University of Washington	USA
249	Josep	Puig	PhD, Engineer, Professor, Autonomous University of Barcelona	Spain
250	Jorge A.	Quillfeldt	PhD, Professor of Biophysics, Universidade Federal do Rio Grande do Sul	Brasil
251	David	Quist	PhD, GenØk - Center for Biosafety	Norway
252	Sagari R.	Ramdas	DVM, Veterinary Doctor, Masters Degree in Animal Breeding and Genetics	India
253	Margaret	Reeves	PhD in Agricultural Ecology, Senior Scientist, Pesticide Action Network	USA
254	Ewa	Rembiałkowska	PhD in Nutrition Ecology, Professor at Warsaw University of Life Sciences	Poland
255	James	Roach	MD, Medical Doctor, University of Kentucky	USA
256	Silvia	Rodriguez Cervantes	PhD, Professor Emeritus, Rural Sociology & Development Studies, National University of Costa Rica	Costa Rica
257	Christopher	Rommel	PhD, MD, Medical Doctor	Germany
258	Kyle	Roos	PhD, Pharmacist	USA
259	Robert	Rountree	MD, Medical Doctor	USA
260	Sergio	Rubin	PhD, Associated Researcher, University of Gent	Belgium

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

261	Charles	Rue	PhD, Master in Environmental Planning, Australian Catholic University	Australia
262	Larry	Schneider	MD, Medical Doctor	USA
263	Gesine	Schütte	PhD, Senior Scientist, Ecologist, University of Hamburg	Germany
264	S.	See	MD, Medical Doctor, Occupational Physician	Malaysia
265	Ramon J.	Seidler	PhD in Microbiology, Professor Emeritus, Oregon State University / Senior Scientist, Head of US EPA GMO Biosafety Program, retired	USA
266	Stephanie	Seneff	PhD, Senior Research Scientist, MIT	USA
267	Sha	Sha	PhD, Molecular Biologist, Post-Doctoral Research Assistant	China
268	Hui-Shen	Shen	PhD, Professor, Shanghai jiao Tong University	China
269	Ilyas	Siddique	PhD in Ecology, University of Queensland, Australia	Australia
270	Margarida	Silva	PhD, Molecular Biology, Assistant Professor	Portugal
271	Roman Andrzej	Sniady	PhD in Agriculture	Poland
272	Joachim H.	Spangenberg	PhD, Helmholtz Centre for Environment Research, Department of Community Ecology	Germany
273	Fern	Springs	MD, Medical Doctor	USA
274	William W.M.	Steiner	PhD in Genetics, retired	USA
275	Klaus Günter	Steinhäuser	PhD, Chemistry	Germany
276	Jayne	Steinmetz	PhD in Nutritional Science, Professor at Food and Nutrition Department, University of Wisconsin Stevens Point	USA
277	Kees	Stigter	PhD, Prof. Emeritus, Visiting Professor in Africa and Asia from Wageningen University	The Netherlands
278	Peter	Stockdale	PhD, DVM, Veterinary Doctor, Professor Emeritus, Fellow of the Royal College of Veterinary Surgeons	USA
279	V.T.	Sundaramurthy	PhD, Entomologist, Ex. Project Coordinator of National Research Project on Cotton	India
280	Mary Kelly	Sutton	MD, Medical Doctor	USA
281	Nancy	Swanson	PhD in Physics	USA

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

282	R.B.	Taylor	PhD, Bristol University, retired	UK
283	Margaret	Thorp	DVM, Veterinary Doctor, Metropolitan Hospital Arkon	USA
284	Jie	Tian	PhD, Institute of Automation, Chinese Academy of Sciences	China
285	Kemal	Topac Ertan	PhD, Biologist, specialized in Genetics and Evolutionary Biology	Germany
286	Terje	Traavik	PhD, Professor of Gene Ecology, Genøk-Centre for Biosafety, University of Tromsø, Norway	Norway
287	Toyoko	Tsukuda	PhD, Molecular Biologist/Biochemist, School of Medicine, University of New Mexico Albuquerque	USA
288	Boldizsár	Vajda	PhD in Microbial Genetics, retired	Hungary
289	Hector	Valenzuela	PhD, Professor and Crop Production Specialist, University of Hawaii at Manoa	USA
290	Ena	Valikov	DVM, Veterinary Doctor, private practice clinician	USA
291	Evaggelos	Vallianatos	PhD, Former Environmental Analyst, US Environmental Protection Agency	USA
292	Christina	van Tellingen	MD, Medical Doctor	The Netherlands
293	Luc	Vandecasteele	MD, Medical Doctor	Belgium
294	Zoltán	Varga	PhD, DSc, Professor Emeritus, Department of Evolutionary	Hungary
295	Alberta	Velimirov	PhD, Biologist, former food quality expert	Austria
296	Karin	Verelst	PhD in Philosophy of Science, Centrum Leo Apostel, Brussels Free	Belgium
297	Angela	von Beesten	MD, Medical Doctor	Germany
298	Thierry	Vrain	PhD, Genetic engineer, retired	Canada
299	John D.	Walker	MD, Medical Doctor	USA
300	Lesa R.	Walker	MD, Medical Doctor	USA
301	Ronald E.	Wall	PhD, Plant Pathologist, retired	Canada
302	Changyong	Wang	PhD, Professor, Chief scientist in biosafety, Nanjing Institute of Environmental Sciences under Ministry of Environmental Protection of China	China
303	Daniel	Weber	PhD, Visiting Professor, Tianjin University	Australia

**Signatories\* No Scientific Consensus on GMO Safety  
as of 20 January 2015**

304	Ileana	Wenger	DVM, Veterinary Doctor	Canada
305	Gerd	Winter	PhD, Professor of Law, University of Bremen	Germany
306	Martin	Wolfe	PhD, Professor Emeritus, Organic Research Centre, Wakelyns Agroforestry	UK
307	Sum Tim	Wong	PhD, Professor in Food and Agricultural Genetics	Taiwan
308	M.P.	Woodland	PhD in Microbial Biochemistry	UK
309	Yan	Xie	PhD, Expert on Biodiversity Conservation, Associate Research Professor, Institute of Zoology, Chinese Academy of Sciences	China
310	Gastone	Zanette	MD, Medical Doctor, Assistant Professor of Anaesthesiology, Department of Neurosciences, University of Padova	Italy
311	Tadeusz P.	Zarski	PhD, Professor, Warsaw University of Live Science	Poland
312	Anna M.	Zivian	PhD, Ocean Conservancy	USA
313	Christof	Zwart	MD, Medical Doctor	The Netherlands
